

Soundboard Manual

Install

1. Fetch zipped archive from <https://raw.githubusercontent.com/four3ye/dist/master/soundboard/sb-latest.zip> → (5)
2. Unpack into a local folder on your computer, e.g. C:\Tools

Now you should have the folder C:\Tools\soundboard containing a start script and two sub folders 'srv' and 'app'.

Start

1. Run the start script 'serverStart.bat' located under C:\Tools\soundboard
2. A console window will appear. Now specify the full path to the folder which contains the mp3 files (→ (1) in screen shot)

Now the server will analyze the given folder and will list up all mp3 files in the console.

Use

1. Run a modern browser (like Chrome, Edge, etc.) and open the URL <http://localhost:8080> (→ (2))
2. A song can be started and stopped by tapping the appropriate tile. While playing a song all other tiles are locked (→ (3))
3. It is possible to configure the start position and the volume of the song. The configuration panel can be opened and closed via right mouse click on the song tile (→ (4))

- The start time in seconds has to be set as floating-point number, e.g. 10.523 → 10 seconds and 523 milli seconds

- The volume has to be specified as floating-point number, the value range is between 0 and 1, default value is 0.8
